

The JayBird JB-100 Bluetooth Stereo Headset works with and streams music from most A2DP mobile phones

The JB-100 works as a mono headset (for phone calls) on any Bluetooth mobile phone including iPhone.

In order to stream stereo sound to any Bluetooth stereo headset, your mobile phone must have A2DP (Advanced Audio Distribution Profile). Every Bluetooth stereo headset and Bluetooth A2DP mobile phone has it's own level of compatibility with each other based on the Bluetooth chip set version and software configuration in each device. While JayBird Gear LLC has not tested all phones on the market and therefore cannot guarantee stereo music streaming with A2DP phones not listed below, the JB-100 was found to be compatible with most A2DP phones tested. Questions: phones@jaybirdgear.com
